

### ***MORE ABOUT Green Cleaning***

In partnership with the providers of janitorial services as well as products, Green Cleaning methods and materials are firmly in place at both the Kaiser Tower and Mall. Green Cleaning means cleaning to protect health without harming the environment. Green Cleaning:

- Improves the cleanliness of the facility.
- Improves the indoor air quality.
- Enhances the health and performance of all building occupants.
- Reduces the detrimental impact on the environment.

These goals are achieved by significantly reducing the exposure to hazardous components of non-green products and cleaning methods and ultimately reducing the risk of harm to people and the environment through use of chemical management, microfiber technology and high filtration vacuums.

Not only has the method by which we are cleaning the building changed to reflect environmental consciousness, the restroom supplies have also been replaced with environmentally-friendly products such as:

**New Hand Towels** – Handtowels are 17% larger and more adsorbent than standard towels. The new hand towels meet EPA (U.S. Environmental Protection Agency) guidelines for post-consumer waste.

**Coreless Bath Tissue** – Coreless tissue means more tissue on the roll, nearly 62%; nearly 100% of the roll is useful product. Coreless tissue results in a 54% reduction in packaging waste from standard rolls. The coreless tissue also meets EPA guidelines.

**All in One Soap Dispenser** – The all-in-one soap is a gentle lotion and skin cleanser. Upon complete use of one dispenser, an entirely new cartridge and dispenser is installed, keeping restrooms tidy and the dispenser is made from recycled plastic milk containers and is 100% recyclable #2 plastic. This product also meets EPA standards for post-consumer waste.
