

MORE ABOUT E-Waste and HazMat

How the e-Waste Recycling program works: All tenants should designate a place, within leased premises, to store items until the e-waste event. This location must be in compliance with building and fire codes, i.e. not blocking egress paths or fire cabinets. Items must be brought, by building occupants, down to the building loading dock during the e-waste event only. Building management can assist with this effort by providing carts and assistance when requested through the Service Desk (a fee may apply).

Acceptable e-waste items include: computer monitors, televisions, CPU and laptops, fax machines, printers, laser jet printers, copiers, telephones and cellular phones, computer components and servers, MP3 players, DVD and CD players, VCR's, power supplies and strips, toner and laser jet cartridges.

How the Hazardous Materials Recycling program works: Building management also coordinates hazardous materials removal. As hazardous waste is a highly regulated market, hazmat items are removed by a contracted third party that ensures the items are collected, treated and disposed of safely, efficiently and within the law. Tenants are encouraged to purchase and maintain dedicated containers for hazmat waste. When the container becomes full, please contact the Service Desk for waste removal. Items will be kept in a secured location within the building and disposed of by the buildings vendor. In addition to single-stream, e-waste and HAZMAT materials removal, Kaiser Center also participates in the recycling of office furniture, carpet and other materials that are difficult to discard due to size or weight. Whenever you are unsure, notify the building Service Desk and we will work with Office Managers to ensure the responsible re-use of any item needed to be removed from your premises.

Acceptable hazmat items include: alkaline household batteries, appliances, microwaves, mercury novelties and lamps.
